MIKES STORY...

Mike was diagnosed with mantle cell non-Hodgkin's lymphoma Feb. 16. There have been many tests, transfusions, CAT & PET scans, hospital & doctor appointments since then. There were 6 rounds of aggressive weeklong sessions of chemotherapy over 6 months. Then came the bone marrow stem cell transplant. The donor was a 36 year old international male.

Mike was released from the hospital after 5 weeks, & is still in isolation at home because he has no immune system. There are still many tests, transfusions & treatments for the next year or so. There's lots of challenges & changes ahead, even Mike's blood type & DNA.

Mantle cell lymphoma (MCL), which represents approximately 6% of non-Hodgkin's lymphoma (NHL) cases, remains the most challenging lymphoma to treat.

to our special friends

Special thanks to every volunteer who made this benefit happen. It's amazing what you've done. Putting this together, the logistics, the great entertainment, preparing the BBQ and bake sale items, collecting donations, and then running the event takes a lot of work! We are so fortunate to have such good and talented friends and family in our corner. You'll never know how much it means to us...
